ACEview 4.0.2.3 Release Notes

The following changes and improvements apply to the 4.0.2.3 release of ACEview.

New Features and Improvements

Deployment

An .msi installer for ACEview is now available for Windows 7 and 8.1

Configuration

Relocated the config data file to a common folder for easier out-of-box configuration

Bug Fixes

Installation

Fixed an incomplete installation error in Windows 7 (32-bit and 64-bit)

Fixed an error after installation due to .dll file blocked by Windows User Account Control

Added USB drivers for Windows 32-bit and 64-bit

Wi-Fi Icon and Wi-Fi Status Display

Resolved an issue where the Wi-Fi icon did not turn red after a connected remote access point was removed

Resolved an issue where the Wi-Fi icon did not turn green after manually connecting to an access point

Resolved an issue where the Wi-Fi icon did not turn green after automatically connecting to an access point

Resolved an issue where ACEview and ACEmanager were displaying inconsistent Wi-Fi status

User Interface: General

Removed the Tools menu

Resolved an issue where the Engine Hours value was not shown on the GPS Information display

Made the Power Status display (on the View menu) unavailable for devices without a Low Power feature
