AirLink Vehicle Telemetry Application (AVTA) 1.4.2

RELEASE NOTES

AirLink Vehicle Telemetry Application (AVTA) 1.4.2 is a minor update to the AVTA AAF application. This release adds functionality and new datapoints.

Note: The improvements available with this release are compatible with ALEOS 4.13.0 or later.

Compatibility with ALEOS Versions

AVTA 1.4.2 remains backwards compatible with ALEOS 4.11.x; however the new features and improvements are only available with ALEOS 4.13.0 or later.

This update is intended for use with AirLink MP70 and LX60WT devices. LX60WT telemetry support has been added with ALEOS 4.13.0.

New vehicle data items that are supported are described in the application note 41113281 Using AirLink Vehicle Telemetry Configuration r5, available on the Source.

New Features

- Added new code to report heading (in addition to longitude and latitude) on any location event when speed is non-zero.

- Added signal strength and signal bar datapoints.
