Power out is conducted at the antenna terminal. Single Modular Approval.

This device is certified for mobile and fixed applications. Co-location of this module with other transmitters would require the use of FCC multi-transmitter product procedures. End-users and installers must be provided with antenna installation instructions and transmitter operating conditions for satisfying RF exposure compliance. OEM integrators must insure that the end user has no manual instructions to remove or install this module. For mobile operating configurations the antenna gain, including cable loss, must not exceed the gains documented in this filing for satisfying RF exposure compliance, as defined in 2.1091. Under no conditions may an antenna gain be used that would exceed the EIRP power limit as specified in Part 96. The Grantee is responsible for providing the documentation required for modular use.

This device has 5 MHz, 10 MHz, 15 MHz and 20 MHz bandwidth modes and it also contains WCDMA and LTE feature with supporting the Bands 2/4/5/7/12/13/14/25/26/41/66/71.

BC: The output power is continuously variable from the value listed in this entry to 5%-10% of the value listed.
